### Introduction

- All went worse since 2020.
- For about three years, we have been noticing more and more frequently that patients have antibodies against mitochondrial RNA and/or DNA.
- There may exist a connection with the mRNA vaccinations.
- Antibodies against spike proteins can be detected often, too.

### Covid-19 vaccinations

- Unvaccinated persons also exhibit this phenomenon.
- One can think of «vaccine shedding».
- In parallel, an infestation of the population with spike proteins is underway.
- These affect the ACE2 receptors of many organs, especially the heart muscle.
- Cases of sudden cardiac death are on the rise, for instance in seemingly healthy younger men.

### Our treatment No. 1

- We have developed a means of treatment that has been known for 2000 years.
- It is a tincture of frankincense, myrrh, and colloidal gold (3x10 drops).
- We tested in all patients with positive antibody titers against RNA/DNA the follow up taking the tincture. There was a significant decrease in the affected patients ( $p < 0.01$ ).
- It seems that the autoimmune processes respond positively to these ingredients.

Figure 1

### Our treatment No. 2

- Against the spike proteins problem we developed a tincture containing e.g. dandelion and pine needle extract.
- Because the myocardium is the most important problem organ, we performed the heart rate variability (HRV) study as a control. The results (especially cardiac arrhythmias) improved significantly ( $p < 0.05$ ).

Figure 2

### Our treatment No. 3

- In order to prevent sudden cardiac death (younger patients) and cardiac insufficiencies (older patients) we tested the in earlier times wellknown remedy Ouabain = Strophanthin.
- To ensure good absorption, we use 3 mg gastric juice-resistant capsules.
- The heart insufficiencies improved significantly, no patient died.

Figure 3

### Conclusions

- What all increases? - free radicals, - autoaggressions (e.g. Hashimoto's, collagenosis, mitochondriopathy), - adverse hyperactivities of the immune system of all kinds.
- The excess mortality in the population is a new phenomenon, too.
- Human beings have about 2000 to 5000 mitochondria in each body cell. They produce the body energy (ATP). Therefore, mitochondriopathy leads to burn-out and/or chronic fatigue syndrome. We recognize them as post covid or long covid cases.
- Our three natural remedies are a successful treatment.
